

*Motion* EXPERT  
Coaching Analysis Software

**Things happen very fast in tennis...can we as coaches effectively comment on and make suggestions related to something that we cannot actually see? The ability to slow down the action and review it again and again is one of the great benefits of taking your laptop along to the court, loaded with suitable software.**

Several coaches have mentioned to me that they find the `**Motion Expert**` video analysis software system very effective, as well as reasonably priced - £199 sterling.

Full details are at the companies website [www.motionexpert.com](http://www.motionexpert.com), and you can even try the product free for seven days. The site also has extensive video tutorials which show clearly what you can do with the software, and how.

**MotionExpert** offers many ways to carry out a detailed analysis of your players strokes including:

- comparing two or more techniques
- use drawing tools to emphasise different body positions
- overlay function
- measure swing speeds
- magnify, zoom, pan
- print and/or email specific frames to your pupils
- copy video to DVD.

**The site is worth a visit if for no other reason than to see what can be achieved with the latest software.**
